

PRESS RELEASE

“BEST CO₂ UTILISATION 2024” INNOVATION AWARD – THREE CCU SOLUTIONS STEERING SOCIETY TOWARDS A FOSSIL-FREE FUTURE

Carbon Capture & Utilisation (CCU) enables the substitution of fossil carbon in sectors where carbon is necessary. Dioxycle, D-CRBN and Twelve showcase winning solutions that pave the path for a renewable carbon society.

Brussels, 23 April 2024: 230 participants from 27 countries worldwide joined the innovation award ceremony at the **CO₂-based Fuels and Chemicals Conference 2024** (www.co2-chemistry.eu) in Cologne, Germany, and online. Renowned as one of the premier global events for the entire CCU and Power-to-X industry and its stakeholders, this year’s 12th edition spotlighted the latest advancements in the rapidly expanding realm of carbon capture and utilisation.

Six nominees showcased their innovative CCU solutions to a diverse audience of global experts. Following this, a majority of the attendees participated in live voting to select the three winners of the “Best CO₂ Utilisation 2024” innovation award.

From renewable ethylene to textile fibres and plastics to cutting-edge plasma-based CO₂ conversion and synthetic sustainable aviation fuel (e-SAF) reducing lifecycle emissions, the three winning CCU solutions open the road to transition away from fossil resources.

The innovation award “Best CO₂ Utilisation 2024” was granted to Dioxycle

The innovation award “Best CO₂ Utilisation 2024” has been granted to the French company **Dioxycle** for the development of Ethylene Producing Electrolyser. This remarkable carbon electrolysis technology transforms industrial emissions into sustainable ethylene solely utilising renewable electricity and water. As a result, Dioxycle’s technology is capable of generating carbon-neutral ethylene at a competitive cost compared to the fossil-based method, offering an economically appealing route to decarbonise numerous industrial and commercial sectors. Ethylene, being the most utilised organic chemical globally, is integral in various everyday products including textile fibers, plastics, and construction materials.

D-CRBN was awarded the second prize for its cutting-edge Plasma-based CO₂ Conversion technology. The Belgian-based company developed a modular and scalable plasma technology capable of splitting the CO₂ molecule into CO, all within a fully electrified, gaseous phase, devoid of solvents or catalysts. The CO is subsequently converted into high-value chemicals, including e-fuels, organic acids, polymers, etc., serving as essential feedstocks for industries such as chemical, petrochemical, maritime, and metallurgical sectors, among others.

Twelve, based in the US, won the third prize for its groundbreaking technology E-Jet[®] fuel. The technology produces Power-to-X sustainable aviation fuel (SAF) using just three components: water, renewable electricity, and CO₂. This innovative fuel underwent testing and certification by the U.S. Air Force in 2021, demonstrating it is a drop-in solution in existing aircraft. Manufactured to ASTM D7566 specifications, the same stringent performance standard upheld by fossil-based jet fuel, E-Jet[®] fuel boasts up to 90 % lower lifecycle emissions, alongside reduced sulfur dioxide (SO₂), nitrogen oxides (NO_x), and other particulate emissions.

Sponsors and partners

The Innovation Award “Best CO₂ Utilisation 2024” was sponsored by Yncoris, a service partner for the future-proof chemical industry, and it is co-organised by nova-Institute and CO₂ Value Europe, the international association representing the CCU community in Europe and beyond.

nova-Institut GmbH has been working in the field of sustainability since the mid-1990s and focuses today primarily on the topic of renewable carbon cycles (recycling, bioeconomy and CO₂ utilisation/CCU).

As an independent research institute, **nova** supports in particular customers in the chemical, plastics and materials industries with the transformation from fossil to renewable carbon from biomass, direct CO₂ utilisation and recycling.

50 experts from various disciplines are working together on the defossilisation of the industry and for a climate-neutral future. More information at nova-institute.eu – renewable-carbon.eu

[CO₂ Value Europe](http://co2value.eu) (CVE) is an international non-profit association representing the Carbon Capture and Utilisation (CCU) community in Europe and beyond with a mission to promote the development of a circular carbon economy based on CO₂ to reduce greenhouse gas emissions and to move away from fossil.

The Association brings together 100 organisations worldwide from **diverse sectors** (including industries, start-ups, universities, research and technology organisations, and regional clusters), and develops a **large network** of many more organisations and individuals who share the belief that CCU technologies are necessary to help the EU reach climate targets.
